The Microtech Xpress XL disc publisher is equipped for high volume CD, DVD, DL DVD & Blu-Ray production. With its 12 recorders and Dual, hot swappable printers, the Microtech Xpress XL is as good as it gets when it comes to unattended disc production. The modular robotics make servicing / repairs simple and fast meaning down time is minimal.

You have a choice of three print types (Black Thermal, Full Colour Thermal, Full Colour Inkjet) and each print is hot-swappable. For example you can print low cost black thermal for 90% of the time and switch to the full colour printer for your one off marketing runs.

Other Microtech Xpress XL Features

API - The Microtech Xpress Range also has a Customisable API as standard. This allows you to integrate the Microtech Xpress into an existing online ordering system or front end of your choice. With the detailed logs, real time feedback and email reporting you will always know exactly what stage your job is at.

Fingerprinting - The Microtech Xpress Range comes standard with the ability to fingerprint data on single track ISO 9660 discs. This means that most CD, DVD, DVD+DL and Blu-ray data discs can be fingerprinted and tracked in some way. There is no additional cost or price per disc with this feature. Once you own a Microtech Xpress you can fingerprint everything if you want.

Serialisation - The Xpress also comes standard with the ability to link merge files and import system data such as time, date, drive recorded and so on. This feature is great if you need to print unique serial numbers, address data or anything that perhaps changes disc to disc. People often print serial numbers in the form of barcodes meaning discs can be scanned in and out of offices or mastering labs.

Disc Spanning - Disc Spanning has been designed to allow back up hard drives, flash memory or storage servers without changing or compressing the data. This is ideal for archive, forensic back up or data conversion.

ImageAligner - Over print additional text onto pre-printed discs. Ideal if you need to add unique data like a serial number, customer name, address, version number or you're printing merge data from a spreadsheet.

Game Developers - There is now the option of installing Nintendo Wii recorders into the Microtech Xpress XE & Xpress XP. On the Xpress XP you are able to mix the drives. Have four Blu-Ray Combo recorders and two Nintendo Wii RVT recorders to give you the ultimate game development system. This is not available on any other duplicator in the world!

Support - Handisc offer a range of support levels to ensure peace of mind. The Microtech Xpress XP comes with 1 years Back to Base warranty but this can be upgraded to a onsite agreement if needed. These can run up to 5 years.

Handisc are an authorised Microtech partner and have a trained support team with 14 years experience selling, Installing, Integrating & supporting Microtech equipment. We carry spares and replacement equipment in-house to ensure the best service available.
