Copy SD Cards and MicroSD Cards in a flash with Handisc's CopyWriter Flash Duplicators. Available in 7, 11 or 15-slot configurations, users can make up to 15 copies at a time in a single system. Making copies with the SD Card Duplicator is easy; simply insert your master thumb drive, fill the remaining slots with blank devices, then press the OK button. Copying commences!

Fully asynchronous copying technology and a large memory cache allows for every slot to operate independently. Copy jobs of any size and permit target devices to be unloaded and loaded on the fly. As soon as a slot signals ready, you can remove the finished, copied media and insert another blank device.

Because these copiers operate without the help of a PC, they're easy for anyone to use. Bit-level comparison ensures a successful copy every time. All current formats are supported, and the unit is backed by Microboards' industry-leading support with a one-year warranty and lifetime phone support. SD Card Duplicators can also be used to erase content from SD Cards and MicroSD Cards, leaving you with a clean, unformatted device.

As the cost of flash memory comes down, the distribution of information on flash becomes more and more viable for companies in the following areas: Marketing/Communications, Field Sales Support, Education, Government, Engineering, Audio/Video, Promotional, and more! With the SD Card Duplicators, you have the ability to make multiple copies quickly, reliably, and without effort.

With Handisc's USB Tower, you have the ability to make multiple copies quickly, reliably, and without effort.

Handisc offer a range of support levels to ensure peace of mind. The Handisc SD Duplicator comes with 1 years back to base warranty but this can be extended.
